Summary

Fresh Data Analyst with 5 months of hands-on industry experience, seeking a Graduate/ Fresh Data Analyst role where I can grow into full ownership of reporting and systems. I turn large, messy datasets into clean, decision-ready reporting – comfortable across the full pipeline from data extraction and cleaning through to analysis and live dashboard delivery in AWS QuickSight. Alongside my technical grounding in SQL, Python, and BI tools, three years working hands-on in fast-paced retail and hospitality operations have made me comfortable being useful wherever the business needs it, not just at a desk, and genuinely curious about how the wider operation runs.

Experience

Cultural Infusion

Sep. 2025 – Apr. 2026

Data Analyst Intern

Melbourne, Australia

- Extracted 10+ years of Zoho CRM records (2015–2026) via a scheduled, **automated data** pipeline built in Python/AWS Lambda, resolving OAuth, pagination, and field-mapping issues to capture **\$7.6M+** in program revenue history.
- Configured and modified **custom fields, calculated fields, and data capture forms** within Zoho CRM, resolving schema definition and field-mapping challenges to ensure accurate, consistent **data collection** across 8+ CRM stages.
- Evaluated and cleaned raw CRM exports – deduplicating records, flattening nested owner/contact fields, and standardising dates and states – removing double-counted revenue across **257 delivered programs**.
- Transformed cleaned data into **4 reusable Athena SQL views** with engineered revenue, profit, and program metrics, and **maintained** these databases to uphold data integrity as new records loaded in.
- Compiled and validated performance figures in **Excel** – using pivot tables, VLOOKUP, and data validation – into weekly scorecard-style reporting for the leadership team.
- Maintained and iteratively developed a multi-page, filterable **AWS QuickSight** dashboard (KPI cards, trend charts, stage/state breakdowns), updated daily and weekly, giving stakeholders real-time visibility into \$7.6M+ revenue across 6 states – replacing a fully manual weekly process.
- **Documented** ETL pipeline architecture, CRM field mappings, and dashboard logic, and used **MS Office** (Excel, PowerPoint, Teams) to communicate findings and process changes to technical and non-technical stakeholders.

Technical Skills

- **Programming & Querying:** SQL, Python (Pandas, Prophet for forecasting), Node.js
- **Data & BI Tools:** AWS QuickSight (live dashboard build, maintenance & deployment), Power BI, Excel (Pivot Tables, VLOOKUP/INDEX, Power Query, Data Validation), MS Office (Excel, PowerPoint, Teams)
- **Cloud & Data Engineering:** AWS (Glue, S3, Athena, Lambda), ETL Pipeline Design, API Integration, Data Cleaning & Validation
- **Analysis & Reporting:** Requirements elicitation & documentation, business process modelling, trend & pattern analysis, stakeholder communication
- **Operations & Systems Support:** 3+ years hands-on in fast-paced retail/hospitality operations (POS systems, stock handling, opening/closing procedures), comfortable picking up day-to-day IT/systems tasks
- **Languages:** English (Advanced, IELTS 7.0), Vietnamese (Native), Chinese (Basic)

Projects

Market Feasibility Analysis – Saint Ann’s School | *Team Co-Lead, ABS TableBuilder, Excel, Python* | [GitHub](#)

- Sourced and integrated multi-domain data – ABS Census 2021, MySchool NAPLAN performance data, competitor fee schedules, and electoral data – to screen 2,500+ SA2-level suburbs against income, child population, education, and occupation criteria, narrowing the field to ~**100** shortlisted suburbs.
- Led the analysis and synthesis across three phases, cross-validating data in Excel and Python to identify three high-performing target clusters (Upper North Shore, Lower North Shore, Hills District).
- Conducted a competitor and market landscape analysis of existing private schools across shortlisted clusters to produce a final, evidence-based suburb recommendation.
- Co-led a six-person team by facilitating task allocation and designed all client-facing deliverables across the three project phases, producing consistent, polished presentations and a final report.

Retail BI & Dashboard Development | *Power BI, Excel* | [GitHub](#)

- Delivered a BI solution for a global retail dataset; cleaned transactional data and designed interactive Power BI dashboards for regional sales and shipping performance.
- Identified underperforming regions and profit-driving cities, delivering targeted recommendations for cost optimisation and regional strategy improvements.

Education

Bachelor of Business Analytics – WAM 77

Mar. 2024 – Nov. 2025

Deakin University

Diploma of Commerce – WAM 80

Feb. 2023 – Feb. 2024

Deakin College
